Fluent", and the iso-surface capability from GAMBIT. In 2017 ANSYS released Fluent 2018 and also now available in version 2017 on Windows 10. The version released on the Windows 10 platform has a new iso-surface capability, a new particle-based solid mechanics capability and a new free surface mode. The solid mechanics capability now includes the capability to impose engineering stress and strain. I have a new Discover One 1035X. I have not had a lot of time to play with it yet, but have noticed memory consumption has been a bit

high. What factors are causing this? Is there a setting that I can change to address this issue? I am running Windows 10. A: You've got a new iMac. Upgrade to the latest firmware, and you'll notice a significant decrease in resources. The first step is to upgrade to the latest version of Apple Thunderbolt Display Firmware. I don't believe there's a simple way to turn off those features that use lots of resources, unfortunately. You'll have to use the built-in features of the machine. The best thing you can do is to use something like iStat Menus to monitor resource usage. I'm not sure exactly what the recommended amount is, but iStat Menus says my current usage is in the 900-1100 MB range, which is normal. You can probably lower that. You can also monitor system usage using the Activity Monitor. Q: Select into memory table with the cursor in SQL Server I'm trying to create a table in a memory database with a cursor. In my code I have the following: DECLARE @sql VARCHAR(8000); DECLARE @firstRow VARCHAR(20); DECLARE @totalRow VARCHAR(20); SET @sql = 'SELECT * FROM SOME_TABLE;' EXEC sp_executesql @sql, N'@firstRow VARCHAR(20), @totalRow VARCHAR(20) OUTPUT', @firstRow, @totalRow OUTPUT; SET @firstRow = '9'; SET @totalRow = '0 82157476af
